ACKNOWLEDGEMENT

We would like to express our deepest gratitude to our project adviser, Ronald Joy Tenco, for his invaluable support throughout the development of Foundly. We also extend our sincere appreciation to the PUP Taguig community for providing the inspiration and environment necessary to build this system. This project is a product of our collective dedication as Group 16, Foundly Team.

USER MANUAL

PLEASE CHECK - [README.md](#) to view the backup documentation.

1. System Overview

Foundly is a community-driven Lost and Found management system designed for PUP Taguig. The platform enables users to report lost or found items, claim ownership of items, and communicate securely with other users through an integrated messaging system.

Core Features

- Secure authentication with strict ID verification (e.g., PUP ID regex YYYY-XXXXX-TG-0, National ID exact 12-digit requirement)
- Discovery feed with search and filter capabilities
- Interactive map integration for location tracking
- Real-time messaging between users
- Claims management system
- Report generation for administrators
- User and role management for administrative staff
- Audit logging for system accountability
- Smart Auto-Match Notifications for automatically alerts users via direct message if someone posts a "Found" item in a category where they previously reported a "Lost" item"
- Automated Avatar in which a system auto-generates sleek avatars using the first letter of a username if no profile picture is uploaded

APIs & Third-Party Integrations

- **Leaflet.js:** Powers the interactive map integration. It provides an open-source, lightweight mapping solution to accurately pinpoint and display where items were lost or found using precise latitude and longitude coordinates.
- **AJAX Polling:** Utilized for the real-time chat system, ensuring messages are fetched and updated continuously (every 3 seconds) without requiring page reloads
